

What is Eclipse IDE in Java ?
 IDE stands for "Integrated Development Environment". By using eclipse IDE, we can develop, compile and run our program in a single environment.

The main advantage of Eclipse IDE is to reduce the development time, since the development time will be reduced by using eclipse IDE.

How to create a Project in Eclipse IDE ?

File > New > Java Project > Provide the name for the project (here SSO-From)

What is Package in Java ?

* A package is a collection of classes and interfaces.

Shows the data in the following two expressions :

Appends 1 :

The two major objects in Appends 1 :

(i) Name can't be re-used [Name can't be used]

(ii) Name can be re-used [Name can be used]

Appends 2 :

In this example, 2. That means it is available as well as Name can be re-used.

A package is nothing but folder or existence. It is used to arrange the classes and interfaces into a particular group.

If we want our class relates into a particular group by using package (below), then we will get the following output :

(i) File > New > Java Project

Type of package :

(i) Standard package : The package which can be created by java software people for arranging the programs is called predefined package.

Example : Date, Day, Month, Year, etc.

(ii) User-defined package : The package which we can create by user for arranging their own programs are called user-defined package.

Example : Date, Day, Month, Year, etc.

What is a class in Java ? (Underlined)

It is keyword to define fields and methods (both are non static field).

If a user wants to define fields and methods, then he has to automatically generate class.

If a user wants to define fields and methods, then he has to generate any class. If a user doesn't want

a class, then we can write :

• One public class we can write and if it is not be the file.

Example :

Test.java (file name is Test.java so Only Test class can declare as public)

public class Test { }

• If a single class we must write only one public class but it may contain in number of class.

Example :

Only Test class we can declare as public.

public class Test { }

So this statement is wrong (Eclipse IDE).

package com.ranvir.soham;

public class Main{ }
